Summary

Data engineer at OpenSport building sports data pipelines and keeping a full-stack app running smoothly. UVic Software Engineering grad with a background in data mining and ML.

Education

Bachelor of Software Engineering | University of Victoria | Sept. 2019 – Aug. 2024

Specialization in data mining and analysis, AI and machine learning.

Work Experience

Data Engineer | OpenSport (PlayWize Technology Inc.) | Vancouver, BC (Remote) | Dec. 2024 – Present

- Build and maintain data pipelines that bring sports data from external APIs into Cosmos DB, using TypeScript with validation, cleaning and transformation steps to keep it reliable.
- Helped migrate the full-stack PlayWize app from Angular to React, testing API integrations and building UI from Figma designs.
- Point person for front-end and back-end fixes: I find and prioritize issues, then bring in the right people.
- Own Jira and Confluence for the team, setting up smarter triage, prioritization and PR review workflows.

Technology Department Co-op | BC Investment Management Corp. | Victoria, BC | Jan. 2023 – Apr. 2023

- Assisted users with technology problems and technical configuration, including laptop reimaging.
- Worked with service desk team members and third-party vendors using ServiceNow.

NFTs for Charity Founder | Entrepreneurial co-op | Vancouver, BC | May 2022 – Aug. 2022

- Generated 5,000 unique NFT images by layering art components with weighted trait rarities.
- Led project planning with a board of advisors using backward planning and Gantt charts.

Software Engineering Co-op | Wenco International Mining Systems Ltd. | Richmond, BC | May 2021 – Dec. 2021

- Tested Wenco systems manually in a test environment and created automated test cases using Robot Framework.
- Created and updated Wenco Message Bus documentation for internal and external system messages.

Project Experience

Marketplace Application

- Owned the recommender on a 12-person Agile team: embedded item descriptions as 768-dimension vectors (PyTorch) and served real-time nearest-item recommendations from each user's weighted "taste vector."
- Deployed as containerized microservices on Kubernetes with a FastAPI backend and PostgreSQL.

Competencies

- **Languages:** Python, TypeScript, JavaScript, SQL, C, C++, HTML, CSS
- **Frameworks & tools:** React, Angular, Next.js, FastAPI, PyTorch, Docker, Kubernetes, Git
- **Data:** Cosmos DB, PostgreSQL, API data ingestion, data validation and transformation
- **Collaboration:** Jira, Confluence, GitHub, Slack; technical documentation, project proposals and memos

Awards

PitchIt Competition Winner (March 2022): 90-second business pitch judged on effectiveness and strength of idea.
